

**ABSTRACT OF THE DISCLOSURE**

5           A dermal, transdermal, mucosal or transmucosal delivery device is  
provided. The device includes a backing layer, defining an ingredient  
containing reservoir, a cover for the reservoir having at least one opening  
therethrough, an adhesive layer and a liner layer. Upon removal of the liner  
layer, the device may be placed over the desired area of the skin or mucosa  
10       and adhesively applied thereto allowing the ingredients to flow from the  
reservoir through the at least one opening to the dermis or mucosa.
